Double pendulum - Wikipedia Double pendulum. In physics and mathematics, in the area of dynamical systems, a double pendulum is a pendulum with another pendulum attached to its end, and is a simple physical system that exhibits rich dynamic behavior with a strong sensitivity to initial conditions. Chaos Pendulum - GitHub Pages The double pendulum is a pendulum hanging from a pendulum. It is a simple physical system that exhibits mathematical chaos. It is very hard to tell where a double pendulum will be precisely in the future, because even a tiny variation in where it starts creates wild differences in where it will be later. The Chaos Machine (Double Pendulum) - instructables.com This turns the chaotic double pendulum into a non-chaotic physical pendulum. I'm going to be lazy and skip writing a big long introduction or explanation for this. The Wikipedia article on chaos theory is pretty good and explains how chaotic systems are sensitive to initial conditions.

In a chaotic system the future behavior is highly dependent on the exact value of the initial conditions. A tiny change in initial conditions can cause huge changes after a short period of time.
